- Security audits and solutions
- Wireless setup and support
- Off-site and Cloud storage options
- On-site computer service and repair
- Remote access setup and support
- Virus and Spyware removal
- Computer products and cartridges
- Data recovery, incident response
- Data conversion
- Custom software development
- Preventative maintenance programs and reviews

## J&D Cloud Storage Solutions

At J&D Computers we offer both off-site and cloud backup and storage solutions. Never again will you or your employees have to perform a nightly backup nor will you have to take your backup hard drives offsite! Remote backup simply means that you never have to worry about protecting your important files ever again!

Unlike traditional forms of backup, remote backup is done completely and safely online, automatically and without user interaction over the internet. We store your data in multiple Tier 4 data centers across the country to avoid data loss due to a catastrophic natural disaster.

Our HIPPA-compliant backup system is completely safe and secure as we use 256-bit AES encryption to protect your data during transmission. Recovering files is just as easy as backing up! They can be restored with just a few clicks. Rest assured that your data will be safe, secured and protected!

Here is what you receive with the J&D Cloud Storage system:

- Automatic backup operations for servers
- Secure 256-bit AES and 128-bit SSL encryption
- Personal assistance for data recovery
- 99.995% availability with Tier 4 data centers
- Bandwidth throttling and backup scheduling

## J&D Network Security Audit

In a technology-driven society, nothing is more important than the protection of your personal and business data. J&D Computers will come on-site to analyze your operating system and applications. By performing a complete and professional Network Security Audit, we will be able to uncover possible security holes, communication errors and computer application weaknesses. Preventing problems before they occur will save your company time and money as well as improve your daily work efficiency.

The J&D Network Security Audit provides you with important information including:

- A vulnerability report, with vulnerabilities ranked by impact
- Antivirus overview
- Server and PC hardware audit
- Software and Hardware incompatibility awareness
- Windows update assessments
- Detect unnecessary shares and open ports
- Wireless node and link detection
- Backup strategy analysis and recommendations
- Translation of cryptic error log messages

**Let J&D Computers resolve your IT challenges and provide your business with safe, secure and functional backup and storage solutions. We look forward to working with you and your business!**
